EDUCATION

Tufts University

Expected May 2029

B.S. in Computer Science, Minor in Music, Sound, and Culture · GPA: 3.83 / 4.00

Medford, MA

- Relevant coursework: Data Structures, Discrete Mathematics, Machine Structure and Assembly Programming, and Introduction to Computer Science

EXPERIENCE

Tufts JumboCode, Software Developer

September 2025 – Present

Student-run software development organization

Medford, MA

- Built a full-stack resource-sharing marketplace in React and Next.js on PostgreSQL, enabling 24 member businesses in the Commonwealth Kitchen network to share equipment, vehicles, and ingredients
- Engineered 3 reusable React components (listing modals, auto-expanding inputs, and posting forms) with hooks to streamline the posting and discovery flow for non-technical small-business users
- Designed REST API routes on a pooled-connection Postgres backend serving all 24 businesses, diagnosing and resolving recurring failed writes to improve API reliability

Tufts University, Undergraduate Admissions Intern

May 2025 – Present

Office of Undergraduate Admissions

Medford, MA

- Led campus tours for groups of 15 to 30 and answered prospective-student questions during visit days of up to 500 attendees, communicating academic and campus information clearly

PROJECTS

A11yGuard – JumboHack 2026 AI Track Winner [Live demo](#)

February 2026

JavaScript, GitHub Actions, Axe-Core, Gemini API

- Built a GitHub Action in a team of 6 that scans repositories for accessibility regressions on every pull request, selected as the winning project from the hackathon AI track
- Designed a differential scanner that compares base and pull-request branches, blocking merges only when accessibility worsens and ignoring pre-existing issues
- Integrated the Gemini API through OpenRouter to auto-generate suggested code fixes inline in each pull request
- Built the CI/CD pipeline so accessibility checks run in real time on every push without disrupting the developer workflow

TuneBug [Live demo](#)

June 2026

Next.js, Supabase, Prisma, Auth.js, Web Audio API

- Built and launched a full-stack ear-training platform with real-time vocal pitch detection (Web Audio API, McLeod Pitch Method) over a 2048-sample, ~43 ms analysis window
- Designed 19 exercise types across 75 lessons spanning ear training, sight reading, intervals, chords, and rhythm
- Implemented user accounts and authentication with Auth.js, persisting per-user progress and streaks in Supabase
- Built an adaptive progress system with Prisma that resurfaces weak notes for spaced review as a user improves over time

PitchSide [Live demo](#)

July 2026

FastAPI, pandas, React, PostgreSQL

- Built a full-stack 2026 FIFA World Cup dashboard spanning all 104 matches, with group tables, a knockout bracket, and player stats
- Built a FastAPI backend exposing REST endpoints for matches, standings, and team stats consumed by a React frontend
- Designed an idempotent pandas ETL pipeline that loads a cached API-Football dataset spanning 104 matches into PostgreSQL
- Generated per-team scouting reports with playing-style radar charts computed from live tournament data, deployed on Render and Vercel

LANGUAGES & TECHNOLOGIES

Programming Languages: Python, TypeScript, JavaScript, C++, C, GDScript

Frameworks & Tools: React, Next.js, Node.js, FastAPI, PostgreSQL, Supabase, Prisma, Git, Vercel

Spoken Languages: English (Native), Thai (Native)
